Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy the solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	Yes
8	Dockerfile / Containerization config (if applicable)	Yes
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Overview of the project's file and folder structure:

```

/book-a-doctor
  /src
    /frontend    - React.js components
    /backend     - Node.js + Express services
    /models      - MongoDB schemas
    /routes      - API endpoints
    /controllers - Business logic
    /tests       - Unit & integration tests
  
```

```
/docs      - Documentation
/config    - Environment & server configs
README.md  - Setup instructions
package.json - Dependencies
.env.example - Environment variables template
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://bookadoctor.vercel.app
Login Credentials (Demo)	Username: demo@bookadoctor.com Password: Demo123
Platform / Hosting Provider	Vercel (Frontend), AWS EC2 (Backend), MongoDB Atlas (Database)
Repository Link	https://github.com/book-a-doctor
Demo Video Link	https://youtu.be/bookadoctor-demo

Step 4: Run Instructions

Step-by-step instructions for the evaluator to run the project locally:

Pre-requisites:

Node.js v18+
MongoDB Atlas account
Git installed

Steps:

- Clone repository:
`git clone https://github.com/book-a-doctor`
- Navigate to backend & frontend folders and install dependencies:
`npm install`
- Configure environment: copy `.env.example` to `.env` and add DB URI, Twilio API key, and Payment Gateway key.
- Run backend:
`npm start`
- Run frontend:
`npm run dev`
- Open browser at:
`http://localhost:3000`

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Multi-language support not yet implemented	Planned for next release
2	Telemedicine video consultation feature pending	Under development
3	Notification service slows under very high load	Optimized with caching; further scaling planned
